

The history and growth of Quonset huts

People have varied needs at different points of time and are not channelized by the same infrastructure at all times. More and more people today hope to purchase items that help in their business even when they are substantially altering the same. This is one prime reason that has led to such wide development of Quonset huts.

We all have noticed those the semi cylindrical metallic structure which are very light in weight used as a storage house called [Quonset huts](#). Normally an iron sheet or a sheet of other popular alloys of iron is bent to form a semi circular shape and it is further with a layer of Zinc or Tin as the case may be to add to the resistance towards getting corroded. This ground breaking merchandise was first erected in a place called Quonset Point in Davisville, a village in Rhode Island. This explains the name of Quonset huts. As it is well known that most famous products are an answer to a need of mankind so was the case with Quonset huts. The first clientele of this configuration were fascinatingly the US Navy which was looking for a supple and flexible building structure to cater their immediate needs to harbor safely their artillery, soldiers and other supplies during the Second World War. The most applied quality of this hassle free assembly of a Quonset Hut is that it could be put to any use since it absolutely resisted any austerity of weather including rains, hail, snowfall etc. Very soon this product became well admired with the traders, store housekeepers and farmers and was at once accepted and a wide variety of structures with an equally wide variety of uses.

Relatively speaking this product is not very expensive and can be prepared in lesser time. Due to the size of the structure it is first manufactured in parts in the factory and later transported to the place where it is required to be put together. Since they do not need skilled assistance for assembly, they can be assembled by the purchases also. Depending upon the precise requirement of the purchaser, some manufacturers also provide customization option but not with complete freedom to alter the structure. Quonset huts these days are available with options to customize them with the carving out of windows, doors and partitions. Cost cutting is the buzzword in the recent sluggish environment and inexpensive substitutes are largely welcomed. This innovative product is therefore bound to be welcomed in the business community.

It is not that the use if these huts is restricted only to the fast growing industrial sectors. They are today being used in the agricultural economies also for storage of grains, machines and harvest. In agriculture oriented economies, these are widely acclaimed since they can be easily erected in farms and put to various uses from protection of crops to harboring of From the above analysis and reasons, little doubt remains that they will soon be the order of the day and will overtake a substantial part of the storage mechanism industry in no time to come.
